```
PS C:\Users\Ghanishtha\college\college1> git help --all
See 'git help <command>' to read about a specific subcommand

Main Porcelain Commands
add                Add file contents to the index
am                Apply a series of patches from a mailbox
archive          Create an archive of files from a named tree
bisect           Use binary search to find the commit that introduced a bug
branch           List, create, or delete branches
bundle           Move objects and refs by archive
checkout         Switch branches or restore working tree files
cherry-pick      Apply the changes introduced by some existing commits
citool           Graphical alternative to git-commit
clean            Remove untracked files from the working tree
clone            Clone a repository into a new directory
commit           Record changes to the repository
describe         Give an object a human readable name based on an available ref
diff             Show changes between commits, commit and working tree, etc
fetch            Download objects and refs from another repository
format-patch     Prepare patches for e-mail submission
gc              Cleanup unnecessary files and optimize the local repository
gitk            The Git repository browser
grep            Print lines matching a pattern
gui             A portable graphical interface to Git
init            Create an empty Git repository or reinitialize an existing one
log             Show commit logs
maintenance     Run tasks to optimize Git repository data
merge           Join two or more development histories together
mv             Move or rename a file, a directory, or a symlink
notes           Add or inspect object notes
pull            Fetch from and integrate with another repository or a local branch
push           Update remote refs along with associated objects
range-diff      Compare two commit ranges (e.g. two versions of a branch)
rebase          Reapply commits on top of another base tip
reset           Reset current HEAD to the specified state
```
